# EPDM Mate-Line<sup>TM</sup> Bridging System

Mule-Hide understands the special needs of Multi-Unit setups. We've custom designed a Mule-Hide Mate-Line<sup>TM</sup> Bridging System specifically for EPDM single-ply roofing systems.

## Components are easy to use and easy to install

- All anchor bolts connecting floors (units) must be even with the surface
- Edges of the structures (units) must be even and tight

### Step 1 - Prep the mate-line areas

- Must be free from protruding fasteners
- If seams are dirty, apply Mule-Hide Weathered Membrane Cleaner

### Step 2 - Prepare the EPDM

- Apply Mule-Hide Tape Primer with Scotch-Brite<sup>®</sup> pads
- Mule-Hide Mate-Line Tape

### Step 3 - Install the Self-Bridging Mate-Line<sup>TM</sup>

- Choice of white or black

## System Benefits

**Easy to Install** - Setup crews quickly learn this system and dealers love it's economical speed of installation and dismantling.

**Flexibility** - Mule-Hide Self-Bridging Mate-Line stays flexible in hot and cold temperatures so it will not crack from building movement.

**Strength & Performance** - This "sealant adhesive" tape provides a consistent thickness of material within the mate-line for performance you can trust.

**Long Lifecycle** - Stands up to UV rays and the punishment of rain, hail and wind.
